

Access Control | D8238 Wiegand Keyfob (26-bit)

Overview

The D8238 Keyfob is compatible with the D8201, D8201W, D8203, and D8203W and Stanley GS3 Low Frequency capable Proximity Readers. Unobtrusive and compact it fits on a key ring, and is often used where photo ID is not required. Each Keyfob is supplied with its 26-bit Wiegand code on a removable label.

As an alternative to the traditional mechanical key, millions of Stanley PAC proximity cards and fobs are used by people as an easy and reliable means of gaining access to their places of work and other secured access points e.g. car park barriers and turnstiles.

The passive proximity technology in the Keyfob requires no batteries or physical contact with the reader; this helps assure that the Keyfobs are virtually wear-free and will provide years of service with no maintenance backed by a lifetime guarantee. Robust, world-class construction combined with advanced technology and a pre-programmed unique identification number without site codes, makes programming easy and copying almost impossible.

Together with the access control system, the Keyfob enables a user's movements to be monitored and the building protected. The Keyfob need only be held near the proximity door reader for the code to be read and access granted or denied within 0.5 of a second. In the event that the keyfob is lost or stolen, it can easily be replaced and the lost keyfob access privileges, simply and instantly revoked.

Key Features

- Offers fast and convenient access
- Small and convenient
- Compatible with Radionics/Bosch™ D9000G and D7000G Control Panels with D-Series readers
